DETAILED ACTION

Double Patenting

1. Claims 39-52 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-5 of U.S. Patent No. 6,631,005 in view of Rieder et al (5,214,280).

U.S. Patent No. 6,631,005 shows all the limitations but does not expressly show the beamsplitter and the scale with two scale patterns. Rieder et al shows the use of a beamplitter (17) and a scale with two scale patterns (6). At the time of the invention, one of ordinary skill in the art would have used a beamsplitter and a scale with two scale patterns in order to better determine the direction of movement of the scale.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 39-52 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yamamoto et al (6,201,239) in view of the disclosed prior art and Rieder et al.

Yamamoto et al show an optical encoder comprising a surface emitting laser arranged as claimed (10) and a photosensor. Yamamoto does not expressly show the photosensor having a plurality of light detecting areas arranged at the claim interval. The Applicant's disclosed prior art in the specification shows in equation (2), the claimed interval where $n = 1$ of the claimed interval.

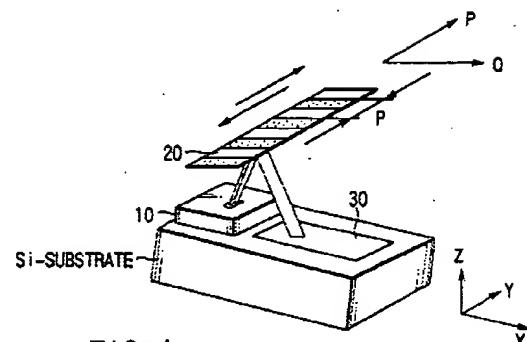

FIG. 4

With regards to claims 40 and 41, please see Figure 4.

With regards to claims 42-52, Yamamoto does not expressly show a beamsplitter and the scale with two scale patterns. Rieder et al shows the use of a beamplitter (17) and a scale with two scale patterns (6). At the time of the invention, one of ordinary skill in the art would have used a beamsplitter and a scale with two scale patterns in order to better determine the direction of movement of the scale.

Response to Arguments

4. Applicant's arguments with respect to claims 39-52 have been considered but are moot in view of the new ground(s) of rejection. Furthermore, in response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., "...the above phenomenon" page

13, last sentence of the last full paragraph) are not recited in the rejected claim(s).

Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).

Conclusion

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
